Dr. Garcia-Murillo researches the impact of technology on policy and economics. Her present work focuses on the impact of technology on employment with an emphasis on the transition toward a more technology dependent society and policies designed to help people displaced by technology find an alternative income. Her previous work has aimed to explain how information and communication technologies affect the creation of new business including the informal economy, instances of corruption and social unrest.

Her secondary research interests include theory development to help scholars make contribution to their fields while understanding the work of previous scholars. In this area she has conducted workshops at conferences and universities. She also has a strong interest in methods of helping international students adapt to and succeed in the United States.
